Due to the size requirement of 1MB on WordPress we have installed an embedded GIF player to be able to support GIF images on the website.

Please take following points into consideration while finalizing your GIFs for you to upload to GIPHY:

- You can use Photoshop to edit and create your GIFs.
- Note that for height proportioned GIFs may have blank space surrounding it on the website due to a standard size block on WordPress.
- We can only host up to four GIFs on the website.

Once you are ready to upload your GIF please make an account and follow these instructions on GIPHY:  [https://support.giphy.com/hc/en-us/articles/360019977552-How-to-Upload](https://support.giphy.com/hc/en-us/articles/360019977552-How-to-Upload)

After you have uploaded your GIFs on to Giphy you can then copy the shared link and paste it into the submission form under the embedded content section.
